UlanziDeck

Archived atlas: six page sets in thirteen themes.

Windows / media - Codex - VS Code - Utility - Themes - Spotify

Automatic application pages on Windows, checked every one second by default.

Manual page choices remain in place until the foreground application changes.

Inactive application keys are gray with the themed NOT AVAILABLE ribbon.

YOUR LOCAL CONFIGURATION

applications.yaml: process names, commands, descriptions, icon IDs and actions.

Runtime: auto_switch and focus_poll_seconds (1-60 seconds).

CLI: run --no-auto-page or run --focus-poll-seconds N.

settings.json retains themes and local settings. Restart after configuration edits.

ARTWORK AND EVIDENCE

78 theme/page atlases and 2,184 normal/pressed PNGs, including clock placeholders.

Earlier atlas pages are retained; the Spotify set follows them in thirteen themes.

These historical layouts predate the current ten-page defaults. See the README and docs/INSTALLATION.md for current setup instructions.

A side project provided as-is, without compatibility or behavior guarantees.

Project source and guide

VibeWare manifesto

One fixed navigation key

Key 04 is top right; key 13 is the wide clock/status display.

00	01	02	03	04 NEXT PAGE
05	06	07	08	09
10	11	12	13 CLOCK / STATUS	

Windows / media -> Codex -> VS Code -> Utility -> Themes -> Spotify -> Windows / media

Select a theme on page five. Theme selection returns to Windows / media.

Automatic switching chooses Codex, VS Code or Spotify when its process takes focus.

A page switch cancels held keys; a release cannot trigger the new page's command.

Unrecognized apps leave the selected page in place; unavailable keys remain disabled.

Spotify desktop shortcut reference

Previous/next use Windows media-session routing. Other Spotify shortcuts depend on the focused control and installed version. This integration needs no account link.

Run, customize, verify

A single executable embeds the artwork; page five selects and saves a theme.

01 / CHECK DEVICE

```
.\ulanzi-dock-vibeware.exe doctor
```

02 / CREATE SETTINGS

```
.\ulanzi-dock-vibeware.exe init
```

03 / START

```
.\ulanzi-dock-vibeware.exe run
```

04 / OVERRIDE THEME

```
.\ulanzi-dock-vibeware.exe run --theme light-abstract
```

05 / EXPORT ART

```
.\ulanzi-dock-vibeware.exe render --output artwork
```

Shortcuts target the focused app. Page five shows twelve alternatives to the active theme and saves a selection to settings.json. The wide display shows only the clock. USB writes, visible output and input are separate observations. Stop with Ctrl+C.
