

UlanziDock VibeWare version

Standalone D200H controller - button artwork, pages and shortcuts

A lightweight resident CLI for 13 display keys plus the wide bottom key. The program draws a complete page, receives input from the D200H consumer HID interface and dispatches a configured action on release.

PAGES	Windows / media - Codex - VS Code
THEMES	Two dark and two light; up/down per key
DELIVERY	Source portable; Windows x64 and ARM64 binaries

EVIDENCE STATUS

Windows x64 build and layout packaging tests passed. The owner confirmed the clock and NEXT PAGE on the D200H with earlier artwork. The new borderless 196 x 196 faces are verified offline and await a physical display check. ARM64 device behavior is unverified.

SOURCE / Project source, generated atlases and owner-supplied Cody PDF layout specification

NOTES / QUESTIONS

One fixed navigation key

Key 04 is top right on hardware; the atlas lists key pairs in numeric order.

12

13 CLOCK

Cycles Windows / media -> Codex -> VS Code -> Windows / media. A release selects the next page once. The wide bottom display shows the clock only.

Mint / teal / Codex

Each pair shows released/up and pressed/down on a full 196 x 196 display face.

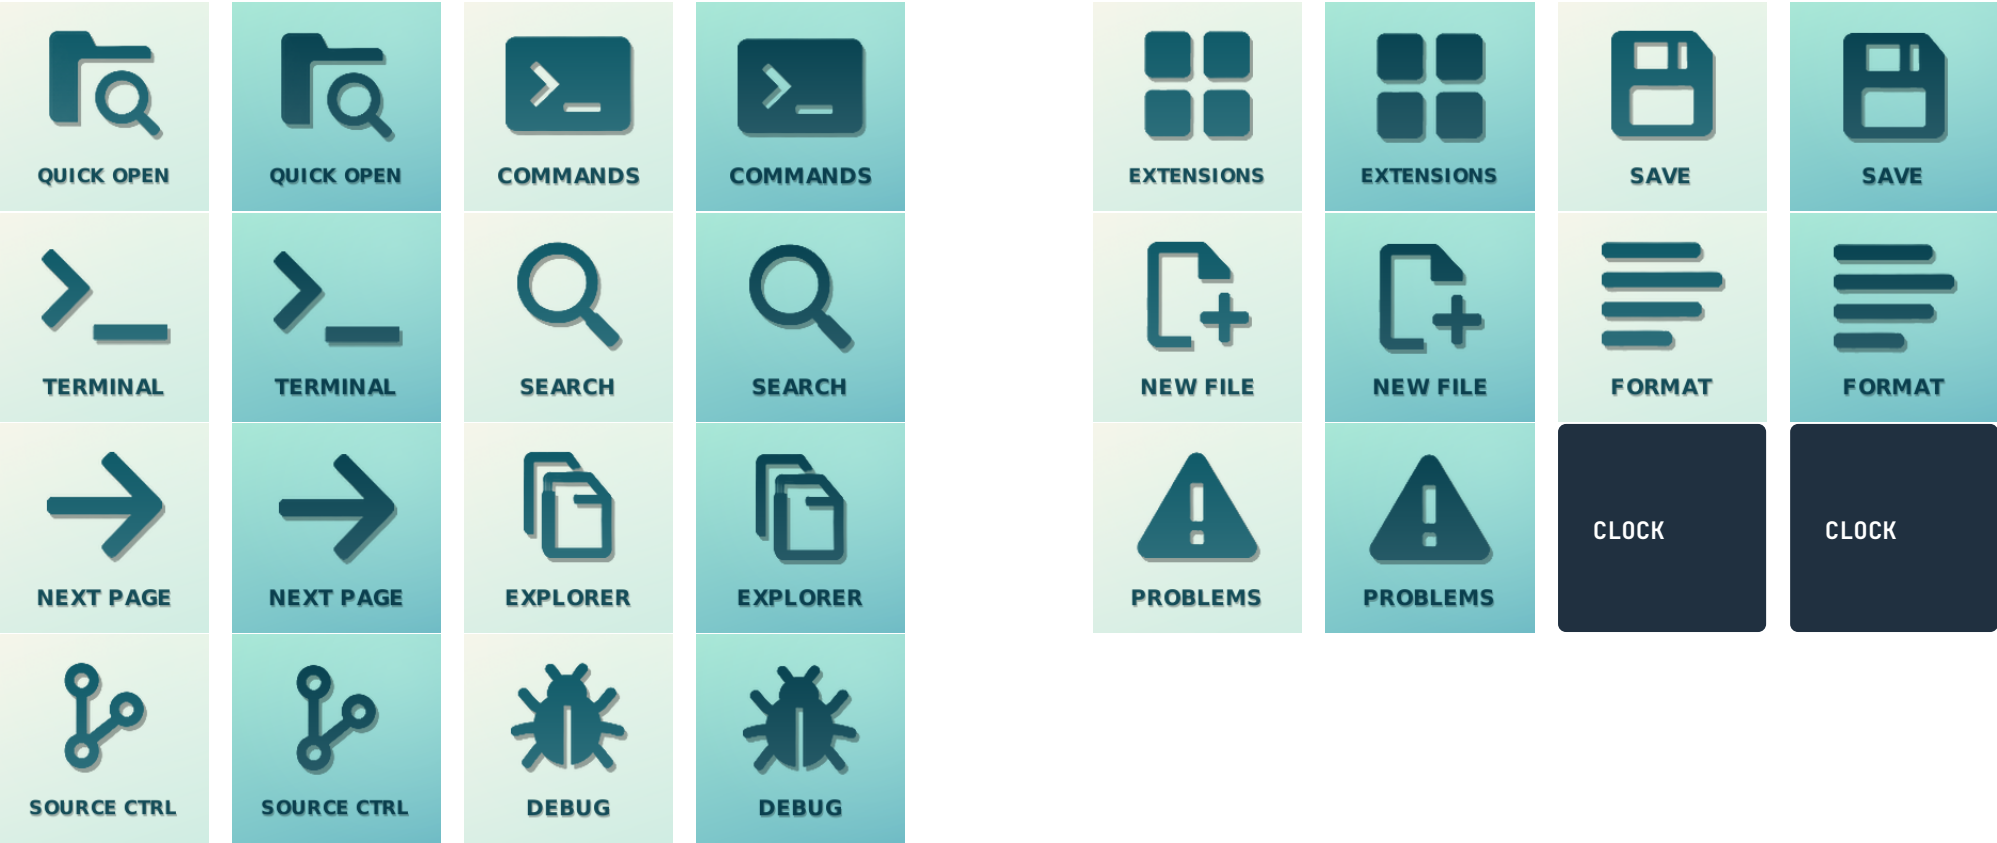

SOURCE / Built-in renderer and assets/buttons; no button bezel is drawn

NOTES / QUESTIONS

Mint / teal / VS Code

Each pair shows released/up and pressed/down on a full 196 x 196 display face.

SOURCE / Built-in renderer and assets/buttons; no button bezel is drawn

NOTES / QUESTIONS

Run, customize, verify

A single executable embeds the artwork; settings.json changes themes and actions.

01 / CHECK DEVICE

```
.\ulanzi-dock-vibeware.exe doctor
```

02 / CREATE SETTINGS

```
.\ulanzi-dock-vibeware.exe init
```

03 / START

```
.\ulanzi-dock-vibeware.exe run
```

04 / OVERRIDE THEME

```
.\ulanzi-dock-vibeware.exe run --theme light-abstract
```

05 / EXPORT ART

```
.\ulanzi-dock-vibeware.exe render --output artwork
```

Shortcuts target the focused app. The wide bottom display shows the clock by default and has no assigned action. USB write, visible output and button input are separate observations. Stop with Ctrl+C.
